CHAIR PADS

Re: Use of Chair Pads with Bentley Mills Carpet Products

To Whom It May Concern:

Bentley Mills, Inc. does not require the use of chair pads with its carpet products. Bentley's applicable warranties for any of our loop or cut/loop pile carpet products will remain in force with or without the use of chair pads.

Chair pads although not required, will enhance the long term performance of carpets. The concentrated, back and forth motion of a person in a typical office chair environment can create fiber distortion specifically on heavy cut pile products; therefore, cut pile carpets are not recommended.

Carpet-type chair casters minimize the distortion effects in conjunction with low, dense loop or cut/loop carpet constructions; these combinations perform well with minimal distortion. Routine maintenance including daily vacuuming and regularly scheduled extractions are required to maintain the general appearance of the carpet.
